

Contact us now for your

Complimentary audit

We can improve your emergency preparedness and incident response efficiency.

If you manage and maintain emergency responders and technology, please consider the following questions to decide if an audit would be of value to your organisation.

- *Will your emergency communication, mobilisation and procedures deliver in a crisis?*
- *Can your current mobilisation system communicate incident type and location?*
- *If your phone and power fails, will you still have site wide emergency communications?*
- *Have you plans to improve your emergency response?*
- *Will extended response times halt production and put people's lives at risk?*

Clients have found our audit reports to be invaluable, clear and to the point. We focus primarily on the probability that there may be additional factors that could restrict your systems effectiveness at a critical stage during an incident or emergency. Our no-nonsense approach allows you to get a clear technical and non-technical overview of your current systems and highlight areas that may need improvement. This complimentary audit offers you a high-level overview of the current state of all your emergency systems and related technologies including:

- Emergency group communications & mobilisation.
- Automated Notification
- IT & Communications resilience
- Command centres and systems
- Emergency Vehicles
- Equipment Training Material & Methods
- Fire and Process alarm Messaging
- Lone-worker and man-down technology
- Equipment maintenance & management
- Standby / Fallback systems
- Security & Threat
- Licensing & Compliance

How the audit process works: We call to your site, at a pre-arranged and convenient time for you, run through our set of audit tools to collect data about your systems, setup and procedures. We'll also talk to a selection of your staff about individual issues and / or concerns that they may have with the current setup. Our non-invasive investigation will produce a concise report about all primary aspects of your emergency infrastructure and also include any weaknesses and potential safety issues. The audit report would usually be completed within a few days of the visit. We'll even come and visit your site to go through it with you if needed. We usually would charge a days consultancy fees plus expenses for this audit however we are currently offering this complimentary audit in return for transportation and accommodation costs to your site. Please contact info@sigteq.com to book you complimentary audit or call the number below. A sample audit is available on request.
